

ASE SURGICAL EDUCATION RESEARCH COMMITTEE MULTICENTER AUTHORSHIP GUIDELINES

The lead Principal Investigator (PI) will determine authorship order and convey this information prior to the start of any study subject accrual. To receive authorship all authors must fulfill ICMJE criteria (<http://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html>). The PI and Co-PI from each contributing institution will then be listed based on a pre-determined method explicitly outlined by the lead PI prior to study enrollment. Up to two authors from each enrolling center will be included. All authors that do not fit on the title line based on the journal of publication requirements should be listed at the conclusion of the manuscript as members of the “ASE Multicenter Study Group on [XXX]”. If the lead center has last author then the study group will be listed as 2nd to last (i.e. A, B, C, ASE Multicenter Study Group on [XXX], LAST AUTHOR). This listing of the study group authors at the conclusion of the manuscript allows investigators to define themselves as a co-author of the manuscript under generally accepted rules of academic authorship for large multicenter studies.

The lead PI from the lead center may allow for additional authorship from their own center or other centers that have significant patient accrual or other pre-determined benchmarks. Regardless, the lead PI will discuss all unique authorship criteria (outside of this document) prior to the start of the accrual of any participants and should have approval from the ASE SERC Chair and Vice Chair. In addition, any important supporting personnel, that do not meet authorship criteria, will be recognized in the Acknowledgement Section.

For subsequent manuscripts which may be constructed, such as subset analyses, the title page authorship may be adjusted according to contribution to that particular examination. Prior to performing a subset analysis, the author should notify the original study PI. The results of these subsequent investigations, along with the manuscript should also be shared with all members of the original investigative group. The listing of the “ASE Study Group on [XXX]” at the conclusion of the manuscript, including all original investigators, should also be included in these subsequent reports. This will permit the original investigators to receive recognition of their work in collecting the data, and permit them to appropriately list themselves as co-authors of subsequent works under the aforementioned organization.
